

Initiative	Develop and Implement Identity Management Services
Description	<p>Identity Management Services will be implemented in the state of Indiana in three distinct phases. Phase I, Directory Synchronization, involves synchronizing the internal NOS directories, Novell and Active Directory. Phase II, Provisioning, will identify data sources that will facilitate the provisioning and de-provisioning of accounts based on an individuals PeopleSoft account. Phase III, Identity Management, will further leverage the capabilities of Phase I and Phase II, and comprise processes, procedures and tools, to accomplish the full-spectrum of authorization, authentication and access to state hosted application. The tool to support this service is a highly specialized database system that stores information like people, places and network services. It can be built on a single directory or encompass a collection of directory instances. The Identify Management Service contains features like improved employee &amp; customer information management, electronic address book, ability to easily generate a printed phone book, ability to generate specialized directories, support standard protocols (DNS, SMTP, Mail Routing, Windows Domains), allows centralized authentication and authorization, and allows for provisioning and de-provisioning of accounts utilizing PeopleSoft HR data</p>
Support of Goal(s)	<ol style="list-style-type: none"> <li>1. Citizen Service: Directory services can provide citizen accounts same sign-on access to multiple applications and services.</li> <li>2. Collaboration: Eliminates the frustration associated with finding email addresses and telephone numbers of state employees.</li> <li>4. Common Solutions: Single shared repository of person related data.</li> <li>6. Customer Service: Directory services can provide employee accounts same sign-on access to multiple applications and services.</li> </ol>
Person / agency responsible	Chris Pichereau / DoIT
Other agencies / areas involved	ITOC, DoIT, accessIndiana, CIO Council
Milestones and completion date	<ol style="list-style-type: none"> <li>1. Develop project approach – March 2004 (Complete)</li> <li>2. Technical Proof of Concept – October 2004 (Complete)</li> <li>3. Implement directory synchronization – December 2004</li> <li>4. Develop and publish development guidelines – June 2005</li> <li>5. Design and implement provisioning services – January-June 2005</li> <li>6. Design and implement full Identity Management – January - December 2005</li> </ol>
